

MONTANA HAIL INSURANCE

SERVING MONTANA PRODUCERS FOR OVER 100 YEARS

2018 Crop Year Annual Report

The State Hail Insurance Program was enacted in 1917 to provide hail insurance to crop producers at actual cost and thereby improve their financial position and the economic wellbeing of the industry and the state. The State Hail Insurance Program is self-supporting through a proprietary fund and reserve established through premiums paid by participating producers. The State Hail Board sets premium rates on a county basis to reflect the actual cost of the insurance. The State Hail Insurance Program insures producers against hail damage on crops grown in Montana, up to the maximum coverage set by statute. Maximum coverage for most non-irrigated crops is \$75/acre and for most irrigated crops is \$114/acre. High value crops are insured at various rates. Please call the state hail office for quotes. Premium rates vary according to the zone you farm in and may range from 5.25% to 11.5% of total available coverage.

Hail Insurance Protects Your Crop Investment

When your crops are established, we encourage you to call the Hail program office at the Montana State Department of Agriculture to purchase your State Hail Insurance.

2018 CROP YEAR

2018 was a rebound year for Montana producers. While portions of the state were still hampered by drought, others saw a significant increase in production. Spring Wheat was the most insured crop with 291,268 acres. State Hail Insurance serves as a valued form of protection for the producers of Montana.
